DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-5, 21-42, 49 and 50, drawn to Servo data/servo channel, classified in class 360, subclass 77.02.
- II. Claims 6-20, drawn to Viterbi decoding, classified in class 714, subclass 795.
- III. Claims 43-48, drawn to Path metrics, classified in class 714, subclass 796.

Inventions I, II and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because group I belongs on Class 360/77.02, which deals with how to control the magnetic recording mechanism with a channel while groups II and III deal with specifics components in any channel, for example the viterbi decoder and path metrics in a channel. The combination/subcombinations of groups II and III has separate utility such as a communication's channel, for example, in which both viterbi detecting and path metrics are used in order to ensure and secure the traveling of data.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Art Unit: 2651

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Groups II and III, restriction for examination purposes as indicated is proper.
